Hello there!

My name is Logan Coning. I am a Web Developer by trade and tech enthusiast by nature.

I began my journey in the web industry in late 2018 by way of the Front-end TechDegree from Treehouse. I immediately became fascinated with learning and advancing my career in this trade. I'm passionate about technology - not a specific framework or language. In this line of work it's about adaptation, and what works best for the project. I'm open to learning any stack if it works.

My motto as a developer is if I'm not learning something new daily, I'm not in the game. I love learning, and am always working to become the best developer I can be. I am a maker - I enjoy creating In my career and after hours. I believe in shipping quality code and working in flow.

I have experience with a variety of projects and project deployment. I have used HTML, CSS, and JavaScript to create front end applications and static pages that demonstrate a responsive mobile-first approach, cross-compatibility with modern browsers, and verified valid programming. While my experience level would indicate I am starting as entry-level, I can quickly adapt and learn new technologies in a flash. If you are interested in checking out some of my work, take a look at my Github page linked on my resume.

I care deeply about the code I write and the effect my work has on the product. I enjoy interaction with clients and seeing the joy they get when they get the application they've been wanting.

I am a Frontend developer by trade, however I seem to have a knack for solving technological problems. I enjoy troubleshooting computers and computer networks and implementing equipment and infrastructure that streamlines performance and usability.

That said - I think I align with what you're doing and believe I would be a great fit technology and culture wise. If I'm not a perfect match for this position I am open to other positions that may better fit my qualifications.

Looking forward to hearing back.

Kind Regards,

Logan R. Coning
